

# ONE STEP THERMAL BRITE

Item #'s 512, 513

For Thermal Printers

## Storage & Imaging Conditions

Humidity levels affect the performance of the color laser copier and the paper. Best results are achieved at 50-70% relative humidity. Always keep the ONE-STEP paper packed and sealed in the ZIPLOK bag until used. Return all unused paper to the bag and reseal. Caution: Dampness in the paper will cause poor reproduction quality.

## Application

1. Determine which side of the regular paper is imaged in your color laser copier (CLC). Place ONE-STEP paper in your CLC so that the blank coated side is imaged. Remember to mirror image on your CLC.
2. Press at 350-375° (190-200°C). Machines vary so test to see what temperature works best with your machine.
3. Peel hot. For an even softer finish on knit fabrics, stretch shirt slightly after applying the transfers.

## Application Times

This product is made for white t-shirts and sweatshirts only. If applied to light color shirts a slight white tint may appear after washing. This tint is not harmful and may disappear over time.

T-shirts	3-6 Seconds
Sweatshirts	8-10 Seconds
Mouse Pads	3-6 Seconds
Puzzles	3-6 Seconds
Nylon Jackets	4-6 Seconds

Other natural fiber items may also be printed.

Note: For application to mouse pads/puzzles leave about ¼" of excess paper around outside. This excess will be used as a tab to remove the paper. The image should cover the entire surface. Place some scrap plain paper on the base of your heat transfer machine. This will protect your platen from the excess image.

## Imprinted Garment Care

ONE-STEP produces an extremely soft hand print. This hand will continue to improve with washing. ONE-STEP garments can be ironed and the color will be enhanced. Wash garment inside-out in warm or cool water. Do not use bleach or hot water.

## Please Note

- All copyright laws apply to the use of the ONE-STEP paper.
- Manufacturer and seller are not responsible for damaged caused by misuse of this paper.
